

## Table of contents

Table of contents .....	2
Table of figures .....	3
Introduction .....	4
Introduction .....	4
1. Motivation for the work .....	5
1.1 Teaching computer architecture .....	6
1.2 Simulators as teaching tools .....	8
1.3 Existing simulator tools .....	9
1.3.1 The Little Man computer .....	9
1.3.2 Relatively simple CPU .....	11
1.3.3 The problem with existing tools .....	12
2.2 Definition of terms used .....	14
2.3 Framework and simulator .....	15
2.4 System documentation .....	16
2.5 Requirement Summary .....	16
3 Design .....	17
3.1 From hardware to software .....	17
3.2 Computer data modeling .....	18
3.3 Computer model versus software architecture .....	19
3.3.1 The open closed principle .....	19
3.3.2 Dependency Inversion Principle .....	20
3.3.3 Liskov substitution principle .....	21
4 Implementation .....	24
4.1 <i>The VirtualCPU framework</i> .....	24
4.2 The Machine module .....	24
4.2.1 Default machine specification .....	26
4.2.2 The default machine at work .....	27
4.2.3 Using the framework .....	29
4.3 The instruction loading module .....	30

Háskólinn á Akureyri	4.4.2004
LOK0183	
Interim report	
4.3.1 Instruction loading at work .....	30
4.4 The assembler module .....	31
4.4.1 Generating a parser .....	31
4.4.2 The assembler at work .....	32
4.4.1 Summary of modules .....	33
4.4.2 Documentation.....	33
4.4.3 Error handling .....	33
4.4.4 Black box testing.....	34
4.4.5 Improvements .....	34
References.....	35

## Table of figures

Figure 1-Little Man Computer.....	10
Figure 2- Start screen for RSCPU.....	11
Figure 3 - control unit .....	12
Figure 4 - Simple computer data model.....	18
Figure 5 - Dependency inversion.....	21
Figure 6 - Overriding subclass .....	22
Figure 7- Machine.....	25
Figure 8 - InstructionLoading .....	28
Figure 9- Assembler.....	30
