

Contents

1	Introduction	1
1.1	Population and conservation genetics	2
1.1.1	Inbreeding.....	3
1.1.2	Genetic bottleneck	5
1.1.3	Effective population size	6
1.1.4	Non-invasive and non-destructive samples	7
1.2	Molecular genetic markers.....	9
1.2.1	Sex identification.....	10
1.2.2	The major histocompatibility (MHC).....	12
1.2.3	Microsatellite DNA	13
1.3	Gyrfalcon (<i>Falco rusticolus</i>)	16
1.4	Study background	18
1.4.1	Population genetic studies of gyrfalcons	20
2	Research objective.....	22
3	Materials and methods	23
3.1	Sample collection.....	23
3.2	Laboratory protocols	24
3.2.1	DNA extraction	25
3.3	Molecular sexing.....	25
3.4	MHC methods and data analysis	26
3.5	Microsatellite loci and amplification procedures.....	28
3.5.1	Statistical analysis	31
4	Results	34
4.1	DNA extraction methods	34
4.2	Molecular sexing.....	35

4.3	MHC analysis	36
4.4	Microsatellite analysis	37
4.4.1	Microsatellite amplification.....	37
4.4.2	Genetic diversity within the gyrfalcon population in Iceland	37
4.4.3	Population structure.....	39
4.4.4	Effective population size	40
4.4.5	Relatedness and individual identification.....	41
5	Discussion	43
5.1	DNA extraction and feathers as a source of DNA.....	43
5.2	Molecular sexing.....	45
5.3	MHC	46
5.4	Microsatellite	46
5.5	Future prospects	52
6	Conclusions	54
7	References	55
