Abstract  iv  

## Chapter 1:  Introduction

1.1 The research question  1  
1.2 Aim and purpose of the study  1  
1.3 The researcher’s position and background of the study  2  
1.4 Significance for nursing and health care  3  
1.5 Definition of key words  4  
1.6 Summary  4  

## Chapter 2: Literature review

2.1 Introduction  5  
2.2 Persistent issues of pain relief  6  
2.3 Barriers to effective pain relief  7  
2.4 Pain and nurses knowledge  8  
2.5 Nurses and pain assessment  9  
2.6 The nurse-doctor relationship  10  
2.7 Nurses distress and ethical conflicts  11  

2.8 Summary  11
Chapter 3: Research design; methodology and methods

3.1 Introduction 12
3.2 Paradigm; research perspective and philosophy 14
3.3 Methodology and philosophical underpinnings 15
  3.3.1 Origins and important scholars of phenomenology 15
  3.3.2 Methodological orientation 17
3.4 Methods used for sampling, data collection and analysis 18
  3.4.1 Data analysis 18
  3.4.2 Sampling 20
  3.4.3 Data collection 20
3.5 Trustworthiness / rigour of the study 21
3.6 Summary 24

Chapter 4: Data collection, data analysis and ethical principles

4.1 Introduction 25
4.2 Access and permission for data collection 25
4.3 The pilot interview 27
4.4 Characteristics of the co-researchers 27
4.5 Data collection and analysis 29
  4.5.1 Selecting dilogue partners 29
  4.5.2 Silencing and participitating in a dialogue 30
  4.5.3 Sharpened awareness of words (data analysis) and
                        beginning consideration of essences (coding) 32
  4.5.4 Constructing the essential structure of the phenomenon
                        from each case (case constructions) 33
  4.5.5 Verifying each case construction with the relevant
                        co-researcher 33
  4.5.6 Constructing the essential structure
                        of the phenomenon from all the cases 34
  4.5.7 Comparing the essential structure of the phenomenon
                        with the data and writing the findings 34
  4.5.8 Verifying the essential structure with some
co-researchers

4.5.9 Identifying the overriding theme which describes
the phenomenon

4.6 Ethical principles

4.6.1 Ethical guidelines
4.6.2 Confidentiality, anonymity and protection from harm

4.7 Summary

Chapter 5: Findings of the study

5.1 Introduction

5.2 A phenomenological description and an overview of the main
themes of the findings

5.2.1 A phenomenological description
5.2.2 An overview of the main themes

5.3 Two drives of the patient’s advocate: moral obligation
and knowledge

5.3.1 The moral obligation and role of the patient’s
advocate
5.3.2 Different goals of treatment and ‘doing no harm’
5.3.3 Nurses’ formal and tacit knowledge and
personal experience
5.3.4 Using your self-confidence and conviction

5.4 Accessing, deciding and reacting

5.4.1 Finding out how the patient really feels
5.4.2 Assistants and tools
5.4.3 Deciding, reacting and finding the best solution

5.5 External obstacles connected with
organisational structures

5.5.1 Time, location, routines and rules
5.5.2 Division of tasks and continuity of care
5.5.3 Availability of prescriptions and physicians
that make decisions
5.5.4 Decisions about palliative care

5.6 Walking the thin line: Inner struggle of moral dilemmas,
doubt of doing right and trusting one’s own judgement
5.6.1 Dilemmas concerning with goals of treatment and patients’ wishes 54
5.6.2 Dealing with prejudices and addiction 55
5.6.3 Fear of giving too much 56
5.6.4 Questioning the patient’s judgement and one’s own 57

5.7 At the gate: participation in mutual decision-making or choosing other roads 58
5.7.1 Having a voice and knowing the gatekeeper 58
5.7.2 Using influence and pressure, willingness to insist and persist; saying the magic words 59
5.7.3 The advocate’s diverse faces: the conciliator and the intermediary 61
5.7.4 Sidestepping the gate; taking control and using a non-pharmacological approach 62

5.8 Positive and negative outcomes of pain management 63
5.8.1 ‘It makes you feel good’: successful outcome of pain management 63
5.8.2 ‘If the patient feels bad, you feel bad too’: the burdens of unsuccessful pain management 64
5.8.3 Nurses’ distress as a drive for action 65
5.8.4 Seeking support and sharing the burden 66
5.8.5 Using one’s own methods to manage and survive demanding cases 67

5.9 Summary 68

Chapter 6: Discussion, recommendations, strengths and limitations, concluding comments and epilogue

6.1 Introduction 71

6.2 Discussion 72
6.2.1 The diagram 72
6.2.2 The moral obligation of the patient’s advocate and knowledge as drives for action 72
6.2.3 Assessing, deciding, reacting and having a voice 73
6.2.4 Organisational obstacles 75
6.2.5 Taking control and using non-pharmacological methods 76
6.2.6 Moral dilemmas and doubting one’s own judgement 77
6.2.7 Positive and negative outcomes of pain management 79
6.2.8 Managing the challenges of pain management 80

6.3 Recommendations for practice and suggestions for future work 81
6.3.1 Implications for practice 81
6.3.2 Implications for nurses’ basic and continuing education 83
6.3.3 Suggestions for future research 84

6.4 Strengths and limitations of the study 85

6.5 Concluding comments 86

6.6 Epilogue: A Nurse’s Reflection on Pain 87
