5. Join an event and interact	8
6. About events in general	13

1. Permissions

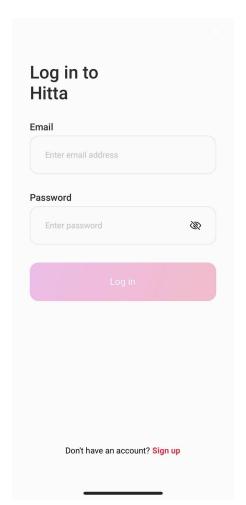

Hitta needs your location to be able to function, you can enable location in iOS settings. Hitta also needs access to your photo library if you want to upload photos, when the permission to access photo library changes in iOS applications, the application restarts. In our case, since Hitta is running inside expo, the permissions for expo changes, so expo restarts. Since expo is restarting, Hitta will close and you therefore need to open Hitta again inside expo.

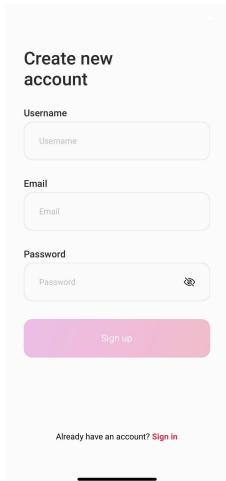

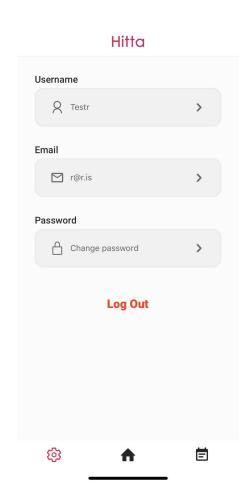

2. Login and user settings

The user signs up with an email, password and a nickname.

Then the user is automatically logged in and can later on change his profile settings (email, password, username) if he wants to.

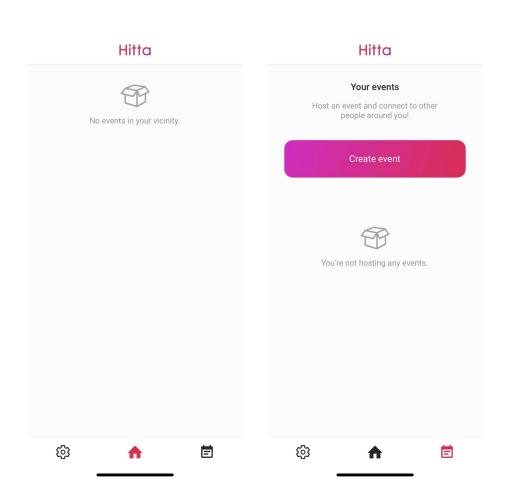

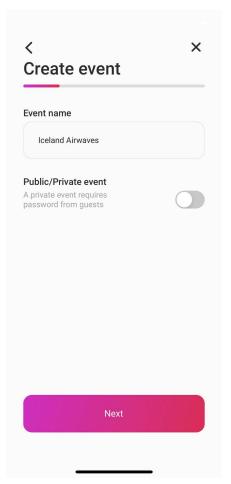

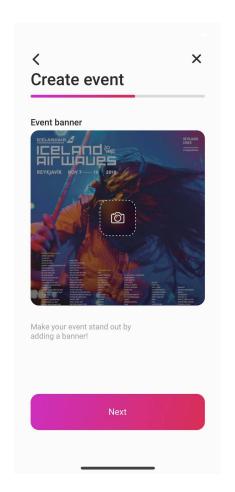

3. Create an event

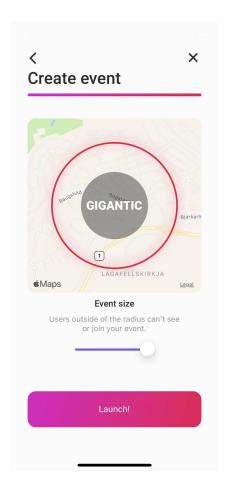

All users can make an event. The user can modify the following things in the creation process:

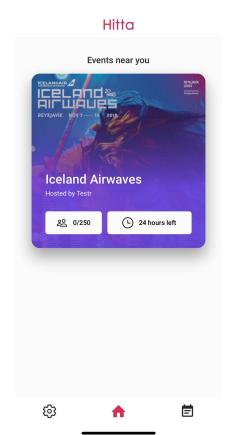

- Name of event
- Public/Private password if private
- Description
- Event image
- Color theme
- Size (in radius on displayed map)
- Duration of event

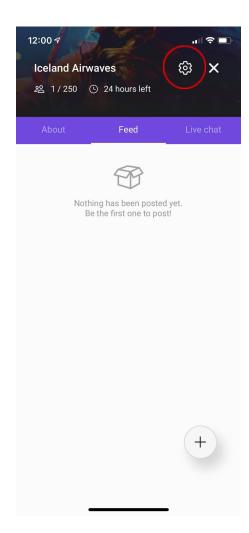

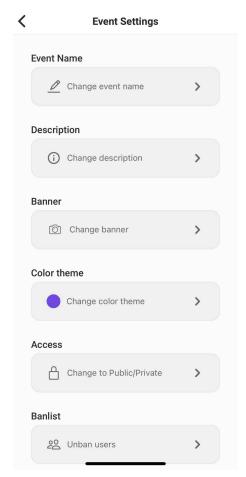

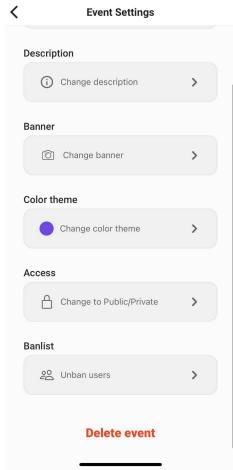

4. Modify and moderate event

After the event is created, the host can see a special settings button in the top right corner next to the exit button. This button takes him to event settings, where he can modify, moderate and delete the event. He can modify almost all the initial settings of the event, excluding event size and duration. He can also unban guests in the moderation tab.

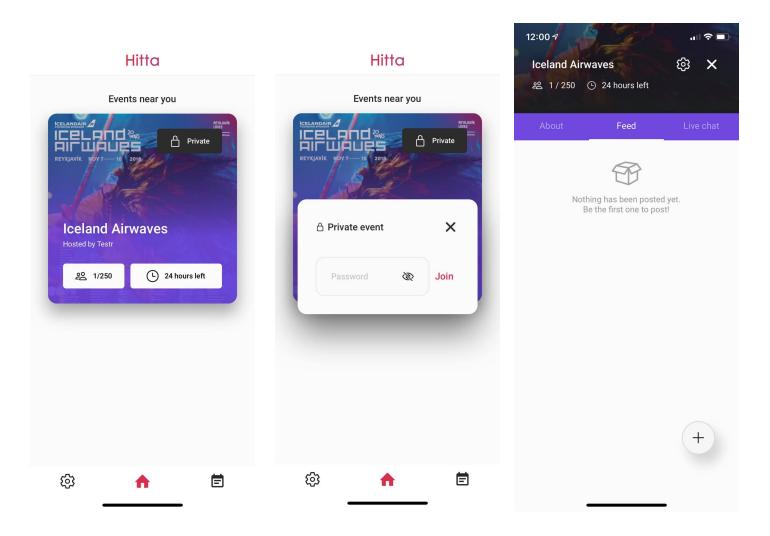

5. Join an event and interact

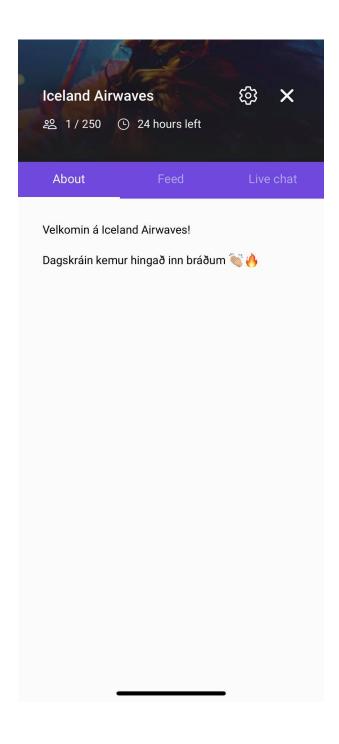

On the homepage after logging in then the user can see all the events that he is in range of and can therefore join these events. In some cases the user can't join the event, following are these cases:

- The event is private A password is needed
- User is banned from the event The event host can unban the user if he wants to
- The event is full Users can't join until someone leaves the event.

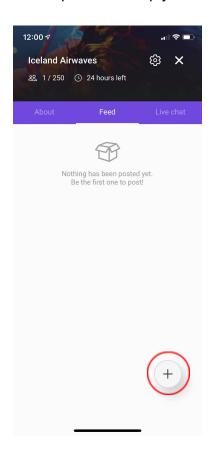

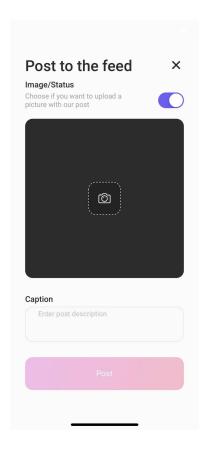

Inside the event a user can navigate to 3 different pages: about, feed and livechat.

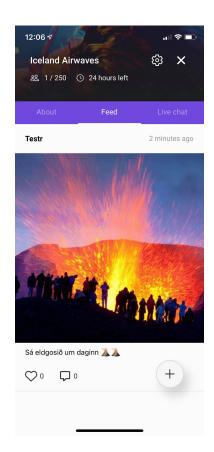

• The about page has information that the host would like you to know about the event.

 In the feed you can post a status with or without an image, like and comment on posts and reply to individual comments.

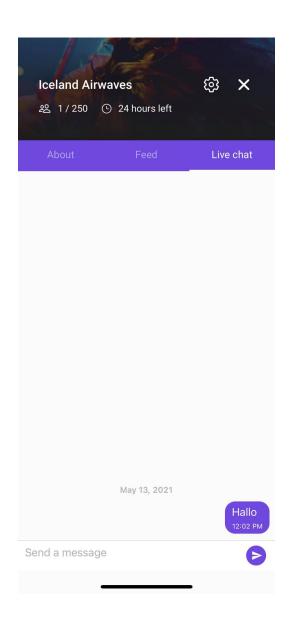

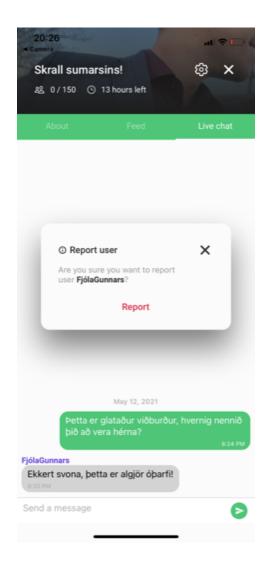

• In the livechat page a user can talk directly to all other guests inside the event.

 If someone posts inappropriate content into the event live chat, feed or comment section other users can report that user by clicking on his user name and then selecting "Report". If a user gets 10 reports he will be kicked and banned from the event.

6. About events in general

Events exist for a certain period of time, when their time expires they get deleted along with their content. Inside an event, users can see the event description, post text or images into the event feed and like and comment. There is also a live chat where all users in the event can chat together.

If some potentially harmful content is posted in the feed or in the live chat then users can report other users. If a user is reported 10 times then he is kicked and banned from the event. A host can then decide if he wants to unban him in the event settings.
